LACEMENT PREPARATIO

Campus Placement Preparation Blueprint

Four-Phase Preparation Roadmap & Milestones

Phase 1: Foundation (Months 1-2)

- Master one object-oriented language deeply (Java or C++ or Python).
- Study core data structures: Arrays, Strings, Linked Lists, Stacks, Queues.
- Complete daily practice of 2 aptitude topics: Number systems, Percentages, Ratios.
- Draft initial ATS-friendly resume.

Phase 2: Core CS & Problem Solving (Months 3-4)

- Non-linear data structures: Trees (BST, Traversals), Heaps, Graphs (BFS/DFS).
- Revise Core CS subjects: OS (Process scheduling, Memory), DBMS (SQL, Normalization), CN.
- Solve 100+ LeetCode problems (Easy to Medium) across Sliding Window, Two Pointers, and Binary Search.
- Build 2 robust full-stack or domain-specific portfolio projects.

Campus Placement Preparation Blueprint

Interview Readiness, Mock Rounds & Drive Day Strategy

Phase 3: Mock Drives & Fine-Tuning (Month 5)

- Take 10 timed aptitude and coding tests simulating online assessment platforms.
- Conduct peer-to-peer technical and HR mock interviews using the STAR framework.
- Participate in campus group discussions on trending technology and socio-economic topics.
- Refine resume GitHub and deployed live project demonstration links.

Phase 4: Drive Execution & Mindset (Month 6)

- Research recruiter job descriptions, eligibility criteria, and past interview archives.
- Rest adequately before drive days; maintain professional attire and backup devices.
- Treat every interview round as a collaborative engineering discussion.
